ABOUT

ARTIST

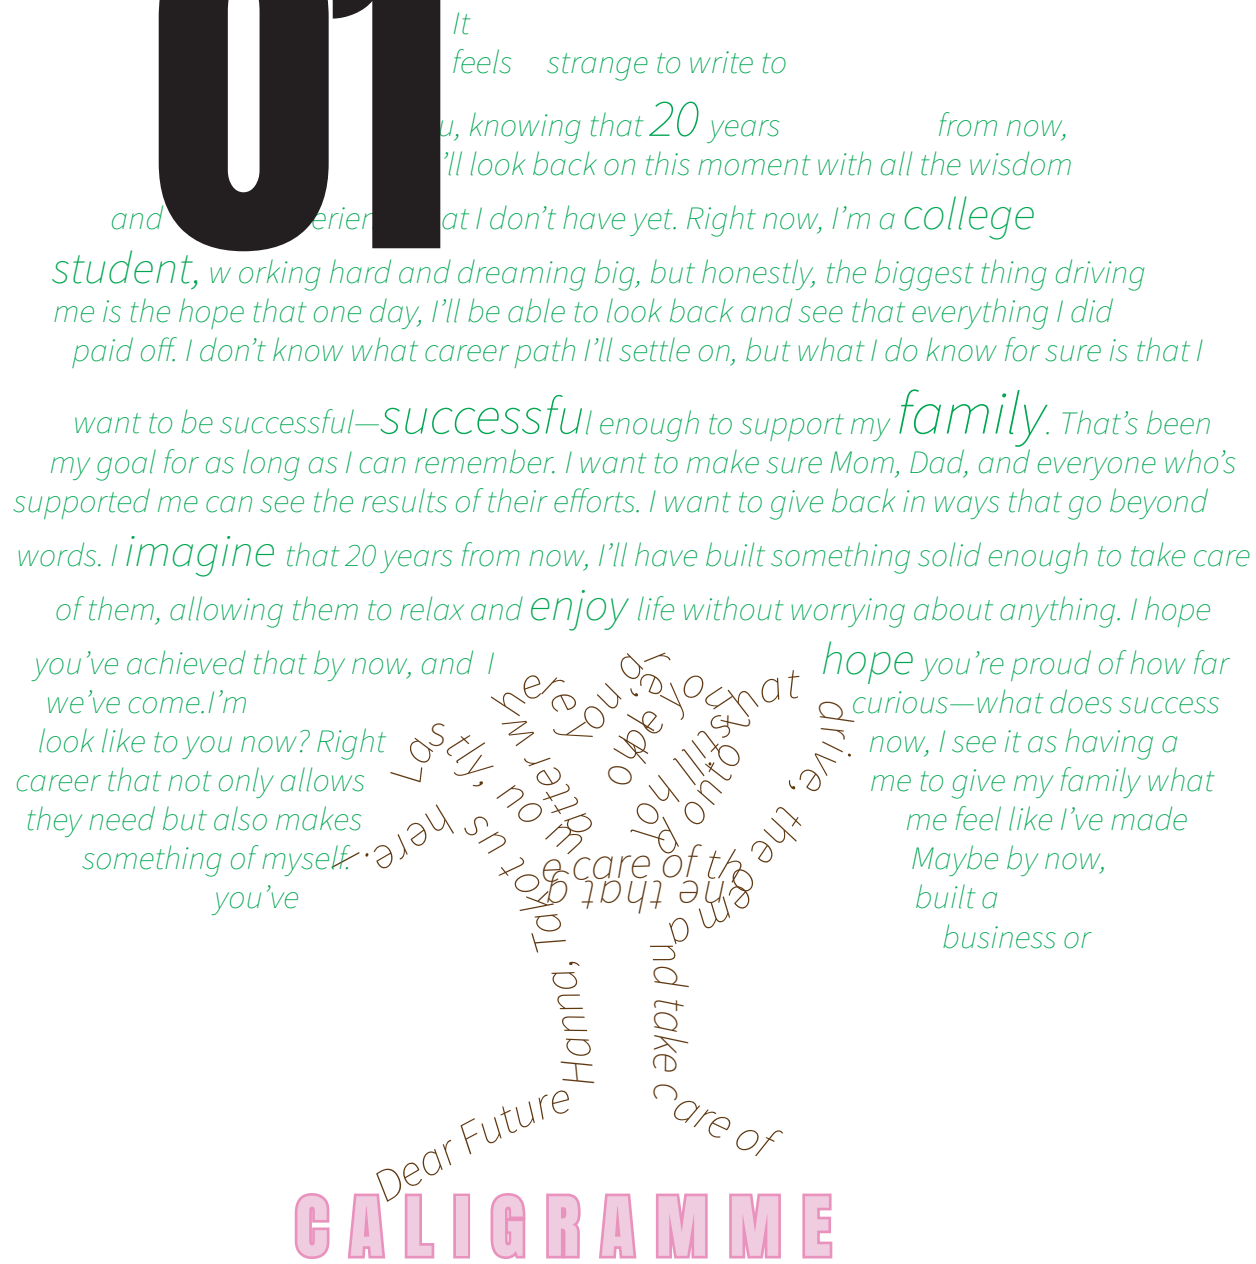

My name is Hanna Berhane, a Computer Science major from Eritrea, and this portfolio represents the creative work I've done in FMX 210. Before this class, I had little experience with design tools, but now I've learned so much about transforming ideas into visual projects. I've explored the intersection of creativity and technology, using tools like Adobe InDesign, Photoshop, and Illustrator to bring my ideas to life.

I've really enjoyed experimenting with colors, fonts, and layouts to create designs that feel authentic to me. This class has pushed me to be more creative and pay attention to the small details that make a design stand out. I'm proud of how far I've come and excited to keep improving!

CHAPTER NO. 01

VECTOR

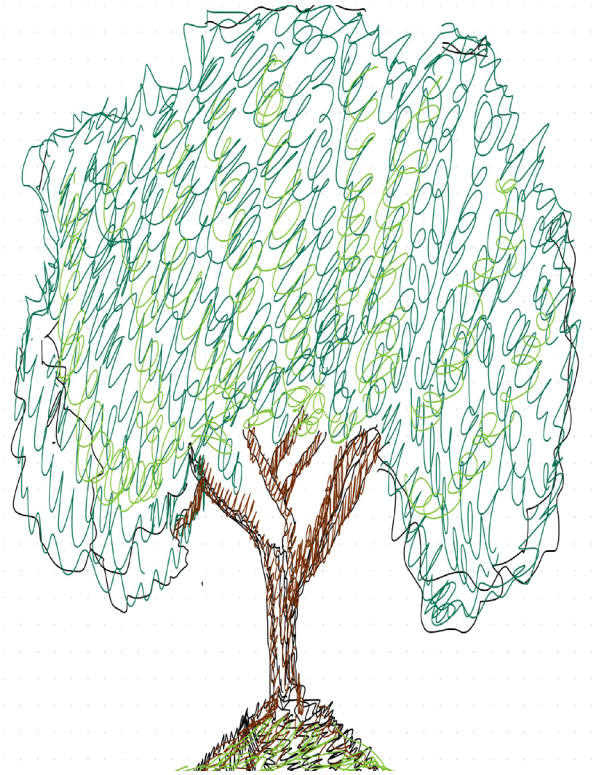

01

CALIGRAMME

The "Tree of Growth" calligram is a personal and symbolic representation of my journey, aspirations, and family connections. Inspired by a letter to my future self, this piece reflects my values, dreams, and dedication. The tree's roots symbolize my family's love and guidance, the trunk represents my determination and hard work, and the branches and leaves embody my hopes for success and giving back.

Using Adobe Illustrator's Type on Path and Area Type tools, I integrated the text into the tree's form, aligning each phrase with its shape to reflect the organic nature of growth. This calligram serves as a reminder of my journey, symbolizing strength, resilience, and my commitment to building a fulfilling future for myself and my loved ones.

Dear Future Hanna,

It feels strange to write to you, knowing that 20 years from now, you'll look back on this moment with all the wisdom and experience that I don't have yet. Right now, I'm a college student, working hard and dreaming big, but honestly, the biggest thing driving me is the hope that one day, I'll be able to look back and see that everything I did paid off. I don't know what career path I'll settle on, but what I do know for sure is that I want to be successful—successful enough to support my family.

That's been my goal for as long as I can remember. I want to make sure Mom, Dad, and everyone who's supported me can see the results of their efforts. I want to give back in ways that go beyond words. I imagine that 20 years from now, I'll have built something solid enough to take care of them, allowing them to relax and enjoy life without worrying about anything. I hope you've achieved that by now, and I hope you're proud of how far we've come.

I'm curious—what does success look like to you now? Right now, I see it as having a career that not only allows me to give my family what they need but also makes me feel like I've made something of myself. Maybe by now, you've built a business or climbed your way up in tech, or maybe life took you on a different path, and that's okay too. Whatever it is, I hope you're doing something that brings you fulfillment and helps you take care of the people who matter most.

I wonder if life is easier now. Do you feel more settled? Have you found that balance between working hard and living life? I know that right now, it feels like a constant hustle, but I'm hoping that you've figured out how to make time for yourself too. You've always been the one to put others first—don't forget to take care of yourself along the way.

Lastly, no matter where you are, I hope you still hold onto that drive, the one that got us here. I know you've faced challenges along the way, and I'm proud of you for getting through them. Don't forget where you came from and the people who've supported you. Keep moving forward, and remember that every step you take is another step toward helping those you love.

Take care of them, and take care of yourself. You've earned it.

With love,

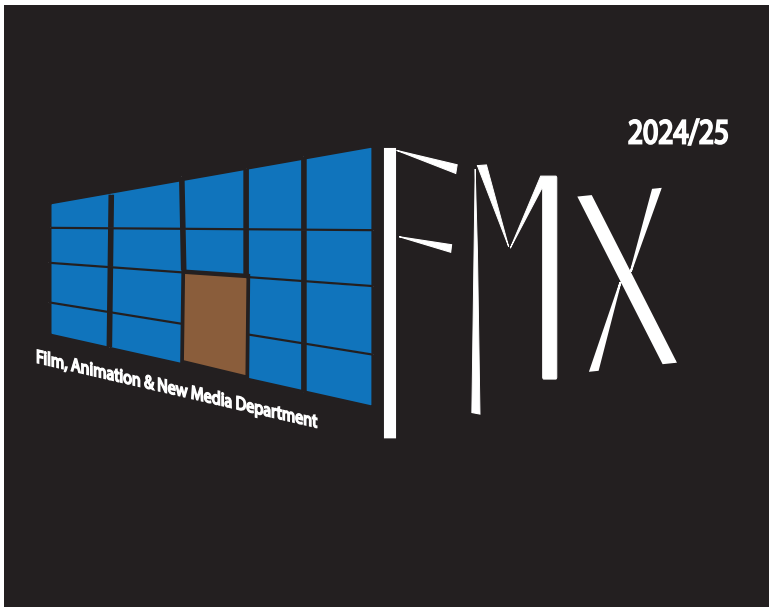

Hanna

2024/25

The FMX T-shirt design represents my effort to create a meaningful and versatile identity for the Film, Animation, and New Media Department for 2024/2025. The design features a stylized grid, symbolizing cinematic screens and storyboards, which are integral to film and animation. The bold “FMX” typography ensures clarity and balance, with clean lines and consistent proportions to maintain versatility across mediums, such as screen-printed T-shirts.

The black-and-white version highlights timeless simplicity and professionalism, while the colored versions incorporate thoughtful palettes. Blue and orange evoke creativity and energy, reflecting the department’s dynamic spirit, while red and gray provide a bold and sophisticated alternative.

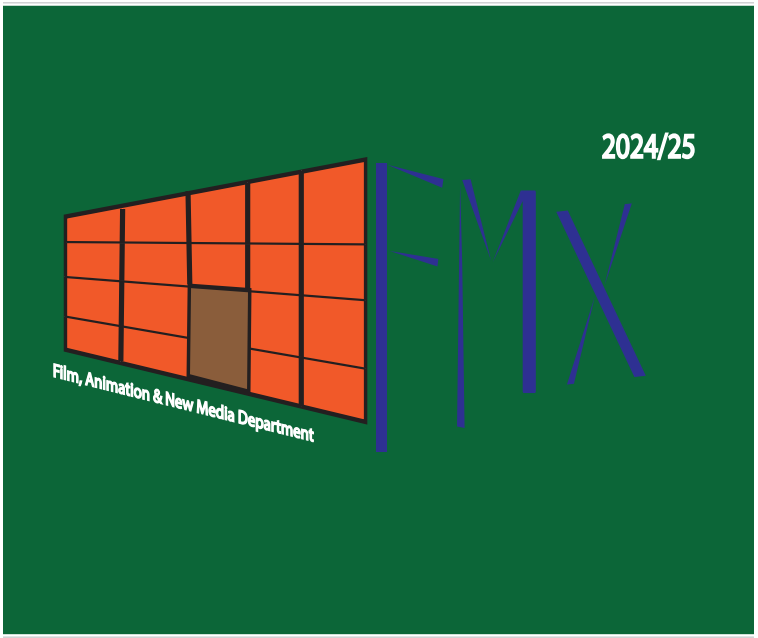

This project allowed me to combine creative exploration with structured design principles. The result is a design that resonates with both faculty and students, capturing the innovative and forward-thinking identity of the FMX department.

SELF PORTRAIT POSTER

This project started with a simple selfie, which I transformed into a bold, vector-based self-portrait using Adobe Illustrator. I wanted the poster to feel personal but also carry a strong message of resilience and ambition. Limiting the design to five colors was a challenge, but it helped keep the focus clear and impactful.

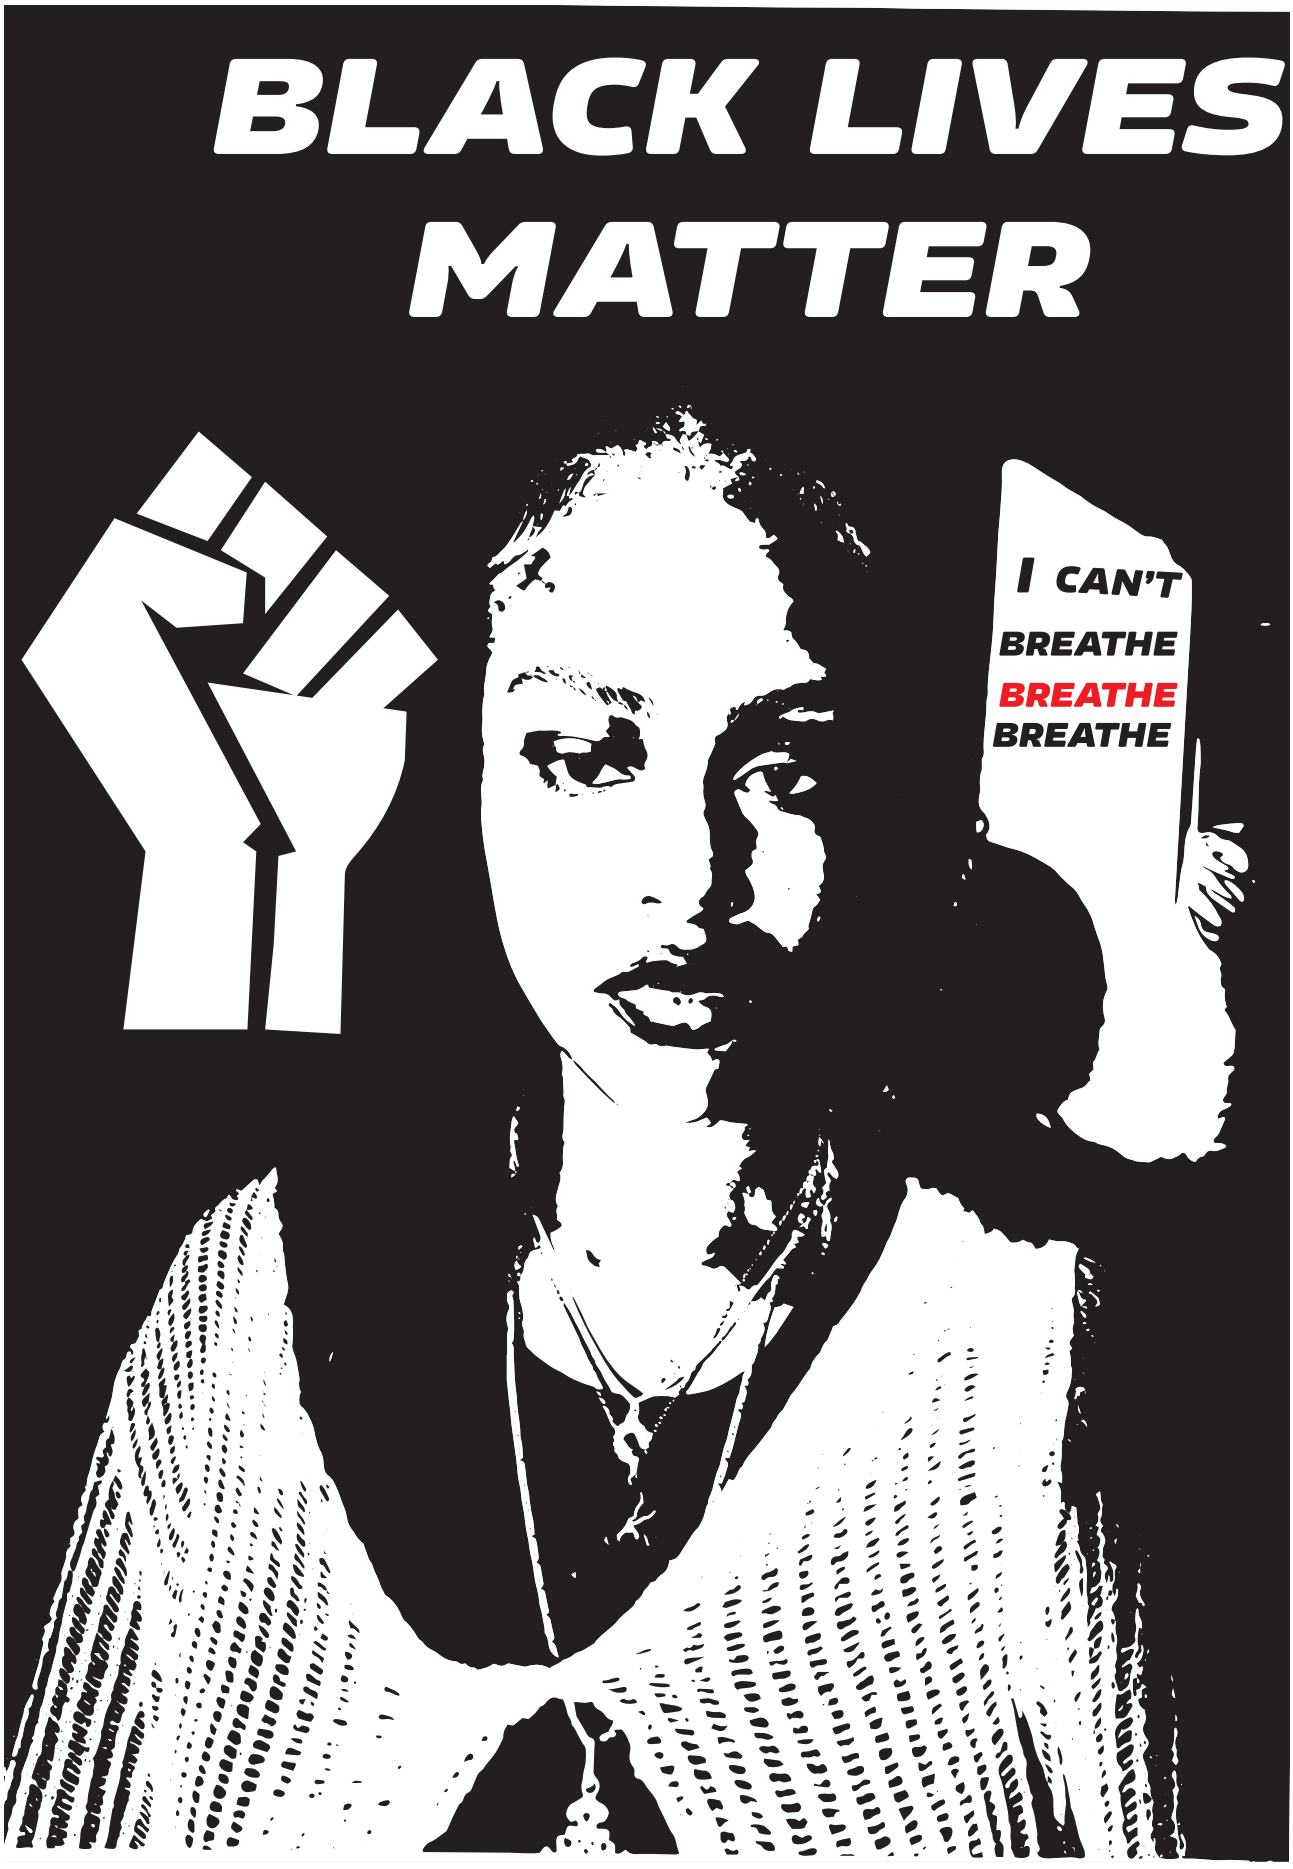

I was inspired by historical propaganda posters, especially those rooted in Constructivism, with their bold typography, angular lines, and strong color palettes. I incorporated radiating lines to symbolize growth and determination, while the text reflects my focus on perseverance and pushing forward.

The process of turning my photo into a vector portrait was both challenging and rewarding. I learned how to simplify shapes and use color strategically to create depth and meaning. The final poster feels like a visual representation of where I am now and where I want to go.

This project pushed me to think critically about how design can communicate ideas, and I'm proud of the result. It's more than just a poster—it's a snapshot of my journey and aspirations.

2024/25

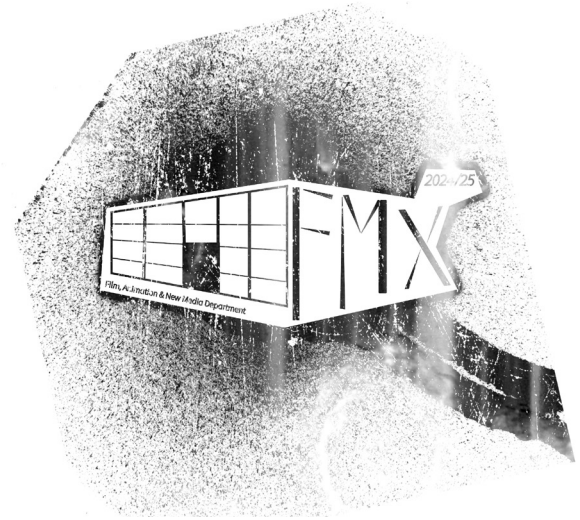

MIX 01

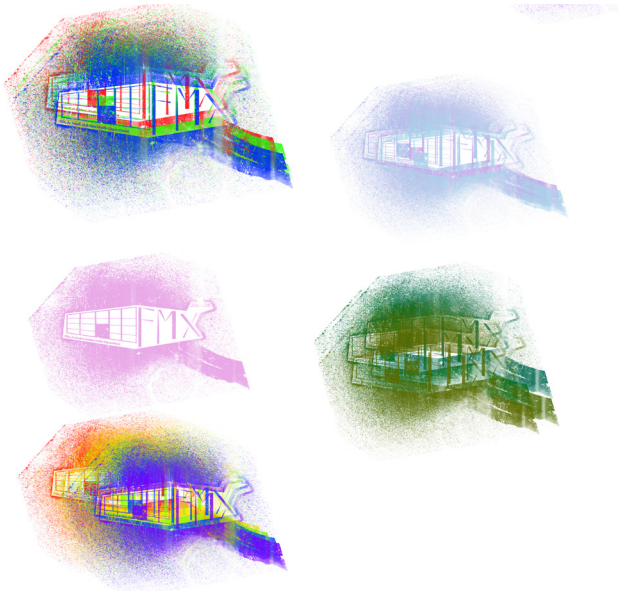

TAG BRUSH

This project represents the transformation of my black-and-white vector logo into a versatile digital tag brush, seamlessly merging branding with functionality. Originally designed to reflect simplicity, modernity, and clarity, my logo has evolved into a reusable Photoshop brush that will serve as my creative signature for all future projects. This shift from static design to a functional tool showcases the adaptability and forward-thinking approach I strive for in my work.

The process required meticulous attention to detail to ensure the logo's integrity was preserved during its transformation into a brush. By focusing on clarity and versatility, I ensured the brush imprint would remain impactful across various applications, from digital illustrations to branding materials. The final tag brush is not just a tool but a visual element that reinforces my identity as a designer, blending effortlessly into different design contexts while maintaining its unique character.

This assignment taught me the importance of cohesive branding, where even the smallest tools can contribute to a unified design style. It also pushed me to expand my technical skills, exploring how familiar elements like logos can become multifunctional assets. By creating a tool that connects each project to my distinct style, I've gained a deeper understanding of how design can function as both art and utility. This project is more than a technical exercise—it's a step forward in building a consistent and recognizable design identity that I'm proud to use and share.

02

CLIMBING SIERRA

"Climbing Sierra" combines creativity and technical Photoshop skills to reimagine a climber's adventure through the perspective of a canine companion. This project challenged me to manipulate layers, employ masking techniques, and incorporate adjustment layers to achieve a seamless and humorous composition.
In this piece, I replaced the climber's face with that of a dog, highlighting the whimsical nature of the design. The climbing equipment, including the helmet and tools, underwent color adjustments to harmonize with the overall composition while maintaining visual interest. To personalize the design, I placed my logo tag on the helmet, adapting its color and blending it with the surrounding elements.

This project demonstrates the power of Photoshop's layer-based editing and showcases how digital tools can transform ordinary images into imaginative and engaging visuals. By combining technical precision with creativity, "Climbing Sierra" offers a fun and dynamic take on traditional photo manipulation.

This project pushed me to think critically about how design can communicate ideas, and I'm proud of the result. It's more than just a poster—it's a snapshot of my journey and aspirations.

03

This project began with a vibrant photo of myself, which I transformed into a black-and-white canvas before reintroducing color in a deliberate and creative way. Using Adobe Photoshop, I applied a complementary color palette that contrasts cool blues and greens with warm purples and oranges, bringing the image to life in a unique and playful way.

The original image, taken in warm natural light, inspired me to experiment with bold hues that evoke joy and energy. The process involved carefully isolating areas like my hair, clothing, and the background to ensure the colors harmonize while still drawing attention to key features. By applying tools like the Brush Tool and adjustment layers, I balanced vibrancy with subtlety, allowing each color to feel natural yet dynamic.

This project highlights how color can transform the mood and meaning of an image. Through this process, I gained a deeper appreciation for how Photoshop can blend technical skills with artistic expression, resulting in an image that is both personal and creatively reimagined.

04

SOME-
WHERE

For this project, I chose a still frame from one of my favorite series, Girlfriends. This show, with its iconic characters and timeless aesthetics, reflects themes of friendship, empowerment, and individuality. I selected a scene featuring the main characters in bold outfits, which inspired me to step into their world through creative composition.

To recreate the moment, I carefully styled my outfit to match the visual tone of the scene. My photo was taken with intentional lighting to mimic the environment of the original still, focusing on complementing colors and textures. In Photoshop, I paid close attention to masking and blending, ensuring my figure integrated seamlessly into the scene. This included matching shadows, adjusting reflections, and aligning lighting for a cohesive composition.

The final result captures the essence of Girlfriends while adding a personal twist. My tag brush is subtly incorporated into the scene, serving as a signature of my creative process. This project was a celebration of storytelling through visual design, emphasizing the connection between individuality and shared experiences. It highlights how digital art allows us to step into the worlds that inspire us and make them our own.

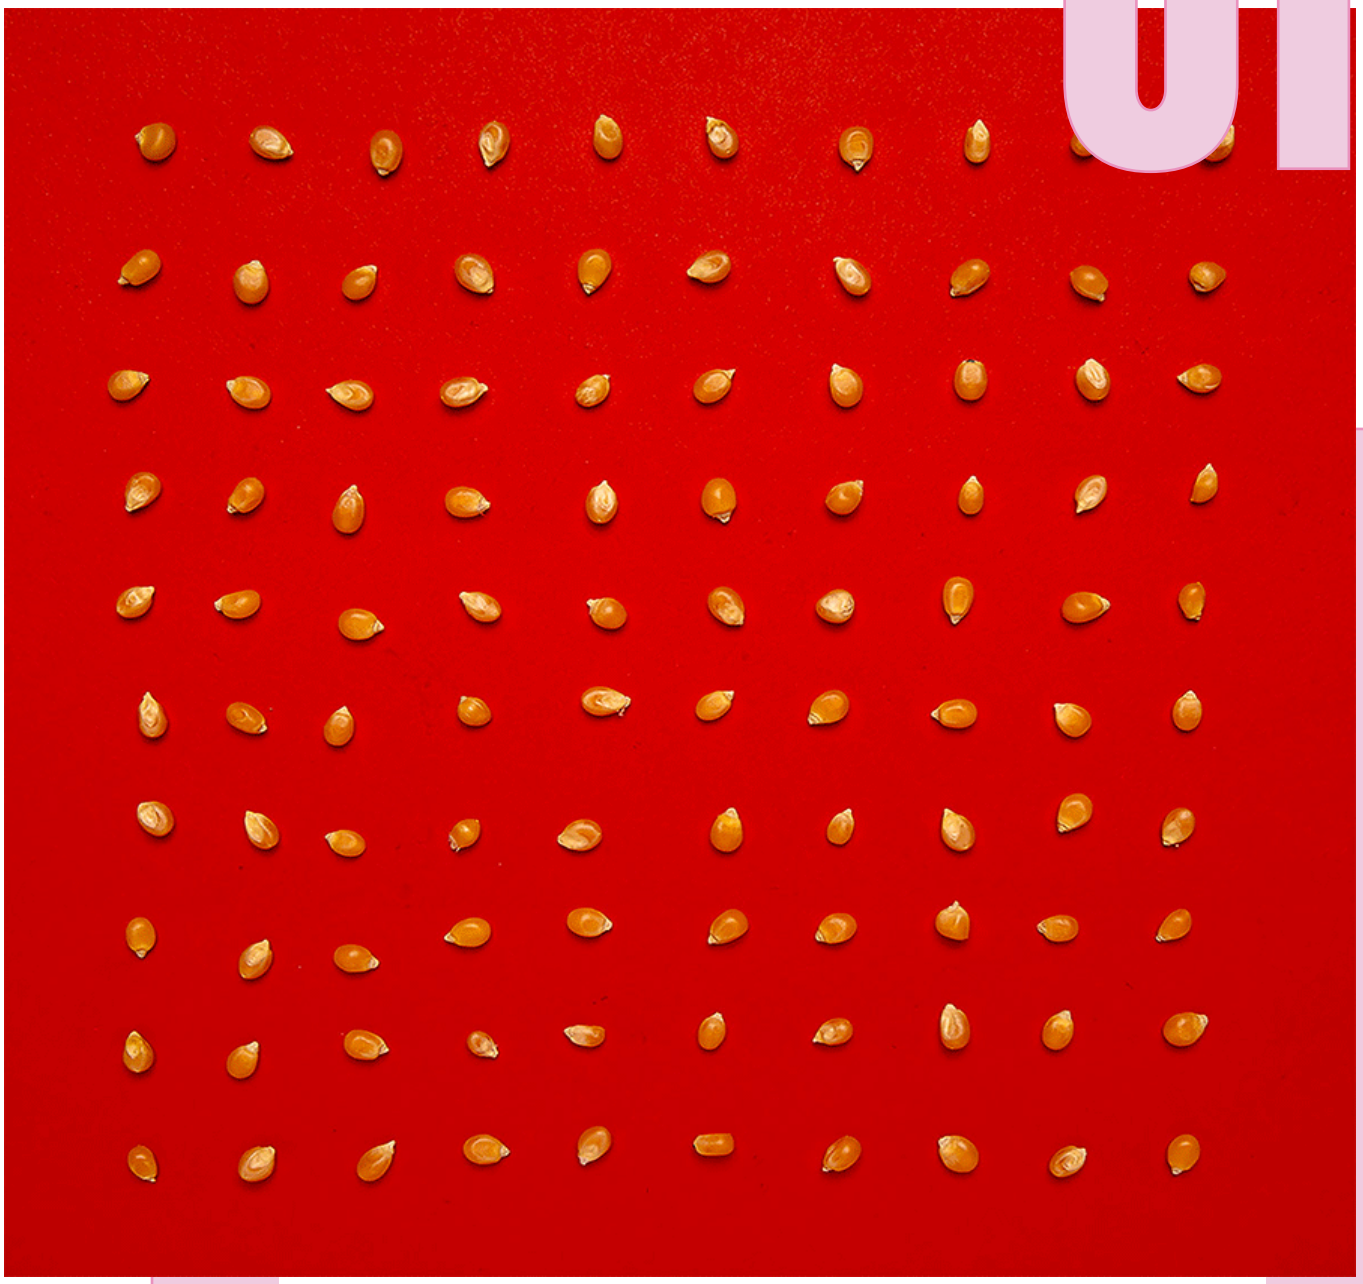

CHAPTER NO. 03

ANIMATION

01

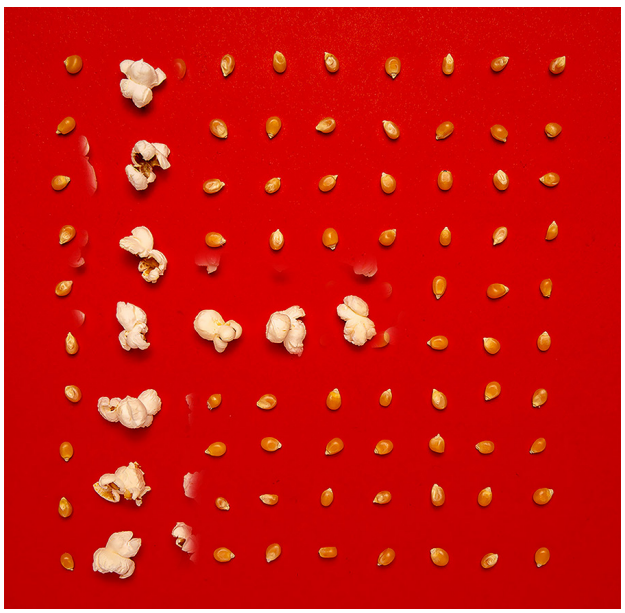

H POPCORN ANIMATION

This project was all about turning something simple and playful—popcorn—into a creative animated design. Using Adobe Photoshop, I created an animation where popping popcorn pieces form the shape of the letter “H,” representing my name. It was a fun way to mix motion and typography with a lighthearted concept.

The process involved carefully timing each popcorn “pop” to make the animation feel natural and dynamic. I experimented with the placement and movement to ensure the final shape of the “H” was clear while keeping the playful energy of popping popcorn. It was both a technical challenge and a creative experiment to combine animation and design in a unique way.

This project taught me how to use small details, like timing and placement, to create something eye-catching and personal. I loved blending creativity and fun into this animation, and it’s definitely one of my favorite pieces so far!

01

For my business card project, I created three versions, each matching the color palettes of my three logos. The goal was to ensure each card felt cohesive with its respective logo while maintaining a clean, modern, and professional look.

I used consistent typography and a simple layout to keep the focus on the logos and colors. This project helped me explore how to adapt a design while maintaining clarity and balance. Each version reflects a unique side of my creativity and brand identity.

PAGE LAYOUT

For my page layout project, I focused on creating a clean, organized design that emphasizes readability and visual flow. Using Adobe InDesign, I carefully structured the content with consistent margins, balanced spacing, and clear typography to guide the reader's eye effortlessly through the page.

THE SECRET LIFE OF SYMBOLS

by Maggie Macnab

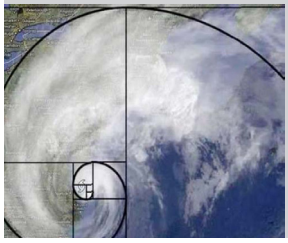

Humans have often been called the symbolizing animal. We use words, number, shape, and other deduced imagery to give context to the intangible. This is how we transport and anchor the imagination: Symbols can be both the exponential leap-point and the connection between the dots. They literally allow us to make sense with our senses-by enhancing visual communication with immediate archetypes that inform our cognitive process. How we sense tells us how to respond or, in the current flood of information, if indeed there is reason to respond at all.

Humans love myth and symbol, as we should. There's a lot of knowledge in this synaptic bit, distilled through the experiences of millions of predecessors. A symbol is certainly a collapsed piece of information, but symbols also expand to fit any human in any culture in any time by linking to universal principles. These cues in turn inform choice: Is it good? What is in it for me? Do I trust? Taking the wrong turn into the jaws of a famished predator is as relevant a concern today in the concrete jungle as it was in the Savannah millennia ago. A composite that immediately tells the story without excessive processing is invaluable. It enhances our edge of appropriate response by giving us access to response-ability.

To get an idea of how symbols unfold information in a logo, let's look at two major contenders in the computer technology market, IBM and Apple. IBM is oriented to left-brain, structural tidiness, while Apple is all about right-brain aesthetic. We intuitively recognize the appropriateness of symbolic representation because we are human. Symbols are just like breathing. We rarely consciously register them, but they are essential to our being. We are ignorant of the essence of our existence, a very human trait.

A DIRECT LINE TO SUCCESS.

IBM's logo is linear-extreme-a letterform that requires a secondary thought process to understand. It is a highly structured and edgy logo, originally designed by Paul Rand in 1956, based on a font called City. The Beat Generation was in full swing and headed toward a mutation known as the Love Generation. There was an undercurrent of dissent and irreverence beginning to touch the surface of culture, and advertising followed suit.

In 1202, an Italian nicknamed Fibonacci penned what has come to be known as the Fibonacci sequence. In this very simple sequence, each number is the sum of the preceding two: 1, 1, 2, 3, 5, 8, 13, 21, 34, 55, and so on. This is a pi relationship. In and of itself, it is not remarkable until you consider that this sequence recurs with regularity in everything from the lengths of the finger bones (which curl into a spiral exactly like a nautilus), to the correlation of the distance between planets and their moons (when they have more than one moon), to the proportionate division of human facial and bodily structure, to the spirals in the head of a sunflower. This sequence actually speaks to the reproductive process of most life forms: It produces patterns that are appealing in our eyes because it speaks to the continuity of our experience. It is precisely about the regeneration of us.

THE APPLE OF OUR EYE.

Apple bridged the gap between man and machine. Steve Jobs' choice to follow what attracted him emotionally led to the first aesthetic computer and opened up an entirely new world to designers. Today, the Apple logo is easily identified worldwide. Its symbology is based in myth and shape.

In the creation myth in the Book of Genesis, God instructs Adam and Eve not to eat from the apple tree in the garden. A serpent taunts Eve when she shies away from the fruit for fear of death. He says that the real reason God forbids the apple is because once she takes a bite of it, her eyes will be opened and she will be "...as the gods, knowing good and evil..."

USING INTUITIVE CONNECTIONS IN LOGO DESIGN

In our information-laden world, it is absolutely crucial that a designer employ critical thinking through understanding intuitive connection when making use of visual imagery. Access informs response: What we intuit lays the groundwork of our actions. If you don't make the connection, that relationship is lost. Conscious study of the symbology of number, shape, and myth tells our minds what our intuition already knows. It completes the synaptic cycle by producing work that is at once effective, aesthetic and ethical. It is effective because an intuitive match leads to greater understanding through initial recognition of a larger concept and is the shortest route between two points; aesthetic because appropriateness leads to elegance; and ethical because when unnecessary or inappropriate content is eliminated, the truth is revealed and something in the larger scope is to be learned
